Re: 100-FR-1 Letter Report

Dear Mr. Wisness:

The U.S. Environmental Protection Agency (EPA) has examined the Letter Report for Rescoped Work Plans for the 100-FR-1 and 100-FR-3 Operable Units. We concur that the content of the report meets the intent of the rescoping negotiations for the 100-FR operable units with the following exceptions:

- The 116-F-3 Fuel Storage Basin Trench was to be included in the LFI path for the high priority disposal facilities and should include one borehole. The tables note this but the text on page 4 does not.
- The 100-F-1 spill was considered a low priority site that will be remediated with the pipelines as noted in the table. The text on page 4 infers that this is a high priority site.
- The sample analysis protocol and data validation requirements for the 100 areas are currently under negotiations between EPA, DOE and Ecology. The revised draft of the rescoped work plans will reflect the outcome of these negotiations.

If you have any questions or comments, please contact me at 376-4919.

Sincerely,

Pamela S. Innis
Unit Manager
